

Kuala Selangor Firefly Park

Kuala Selangor is a small coastal village northwest of Kuala Lumpur. There are still fireflies to be seen.

Visitors can go to Kampung Kuantan and Kampung Bukit Belimbing in the district of Kuala Selangor. The mangrove trees grow along the riverbanks of Kuala Selangor river. These are the trees where the fireflies or “kelip kelip” in the local language stay and feed on its leaves. During the day, they retreat to the grasses near the mangrove trees.

When night falls, the fireflies will feed on the nectar of the leaves and attract mates with their synchronised flashing green light. The thorax of the insect produces a green glow that flashes at a frequency of 1/3 Hz, or 3 flashes in one second.

River Cruising

For nature lovers who wish to experience wildlife adventure as an alternative to trekking, river cruising is the perfect choice. In Malaysia, there are many rivers and mangrove areas where wildlife viewing is possible from the water. Riverine and mangrove habitats are home to large amounts of indigenous flora and fauna; and by nature many animals are drawn to water sources for drinking and cooling.

Whether for serious exploring or just a leisurely outing, a river cruise is an escape to another world. Glide beneath large overhanging trees with the rustle of animals, the call of birds and look out for creatures below the surface. Be rewarded with scenic hill views or spectacular limestone

formations on the way, and end the cruise at a waterside stop for a meal amidst the splendour of nature.
